

In order to complete the work on time and good quality, we have also discussed how we should divide the work such that we can successfully finish the assignment.

Ke Xu will be responsible for writing the type 1 Plugin, which involves extracting data from the website. He is experienced with extracting data from website as he has been working on similar projects in other classes.

Lam Wing Chan will be responsible for writing the second plugin, which involves visualizing data and discovering library which is useful for writing the visualizing plugin.

For writing the framework, we would both work together and have overlapping responsibilities. We would also work together in finding our data source files.

We have set internal deadlines so that we allow time for more discussion and changes. Since the project is due on Tuesday, we decided that we should complete the overall framework by the weekend to allow a few more days for improvement by discussion over possible changes over the weekend. We have also decided that we should complete the plugins by Monday so that we can have a day to improve on the plugin.
